

Backend Engineer (.NET Core)

Siddiqi Hospitality Pvt. Ltd.

Islamabad, Pakistan
Full-Time | On-Site

About Siddiqi Hospitality Pvt. Ltd.

Siddiqi Hospitality Pvt. Ltd. is building Pakistan's first AI-powered, hospitality-first Online Travel Ecosystem. Our mission is to create a globally competitive OTA platform that integrates hotels, flights, car rentals, experiences, and corporate travel under a unified, scalable, API-driven architecture.

We are not building a website.

We are engineering infrastructure for national travel commerce.

Role Overview

We are seeking a **high-performance Backend Engineer (.NET Core)** who can architect, build, and optimize mission-critical systems that will power a multi-vertical OTA platform.

This role requires deep technical maturity, performance-driven coding standards, clean architecture discipline, and the ability to build systems that scale to millions of transactions.

You will be directly contributing to the core engines of our OTA ecosystem including:

- Hotel Inventory & Rate Engine
- Flight API Integrations
- Booking & Payment Orchestration
- Vendor & Partner APIs
- Admin & Internal Tools

- Reporting & Analytics Pipelines
-

Key Responsibilities

1. Architecture & Engineering

- Design scalable microservices using **.NET Core**
- Implement clean architecture principles (SOLID, DDD, CQRS)
- Build high-availability REST APIs
- Implement event-driven systems where required
- Ensure performance optimization and low-latency response times

2. OTA Integrations

- Integrate third-party APIs (Hotels, Flights, Payments, GDS, B2B suppliers)
- Implement rate caching logic and search optimization
- Handle concurrency, retries, and fault tolerance
- Manage authentication layers (OAuth, JWT)

3. Database & Performance

- Optimize SQL Server queries
- Design normalized & scalable schemas
- Implement caching strategies (Redis or equivalent)
- Reduce query latency and API response time

4. Security & Compliance

- Implement secure authentication and authorization
- Ensure PCI-compliant payment flows
- Handle encrypted data transactions
- Maintain secure coding standards

5. DevOps & Deployment

- Work with CI/CD pipelines
 - Dockerize services
 - Support Azure/AWS deployment architecture
 - Ensure logging, monitoring & health checks
-

Technical Requirements

Must Have

- 4+ years experience in .NET Core backend development
- Strong command of C#
- REST API design expertise
- SQL Server advanced optimization
- Entity Framework Core
- Git version control
- Understanding of microservices architecture

Preferred

- Experience in OTA / Travel Tech / E-commerce
 - Experience with payment gateways
 - Knowledge of Redis or distributed caching
 - Azure or AWS deployment experience
 - Message brokers (RabbitMQ / Kafka)
 - Docker & containerization
-

Performance KPIs

- API response time under defined SLA
 - 99.9% uptime support
 - Zero critical security vulnerabilities
 - Integration delivery within sprint timelines
 - Clean, documented, testable codebase
-

What We Do NOT Want

- Developers who only execute tasks without ownership
 - Slow learners in a high-growth environment
 - Copy-paste coders without architectural thinking
 - Individuals uncomfortable with structured documentation
-

What We Value

- Founder mindset
 - Hospitality-first thinking
 - Speed with discipline
 - Process ownership
 - Systems thinking
 - Documentation culture
-

Why Join Siddiqi Hospitality?

- Build Pakistan's most ambitious travel-tech platform
- Work directly with executive leadership
- Opportunity to grow into Lead / Architect roles
- Competitive salary aligned with performance
- High-ownership environment
